

PRECAUTIONS FOR USE AND INSTALLATION SERIES 59000

1. Check that the product received matches the one ordered.
2. During all operations the applicable safety regulations and the procedures required for the plant in which the product is installed must be observed.
3. Installation, use and maintenance operations must be carried out by suitably qualified and trained personnel to work on systems with pressurized fluids. This personnel must use suitable equipment and instruments and use appropriate personal protective equipment according to the actual installation, use and maintenance conditions.
4. The product is delivered sealed in a bag to protect it from external contamination, in case of damaged packaging the product cannot be used.
5. Store the product in its original packaging which must only be opened at the time of installation.
6. We accept no responsibility for changes to the product made without the written authorization of the manufacturer.
7. The manufacturer cannot be held responsible for any accident or damage due to incorrect installation, use or maintenance. Responsibility is the sole responsibility of the user.
8. The use of the product outside the limits of use indicated in the catalog or in the technical data sheet is not permitted.
9. The product is not suitable for cyclic fatigue loads, services in corrosive environments, fluid with the presence of abrasive solids. Applications at temperatures below the solidification point of liquids should be avoided.
10. Depending on the temperatures of the process fluid, the surfaces of the product can reach high values during operation.
11. Before being subjected to any maintenance or disassembly, to avoid injury to persons caused by sudden release of pressure, isolate the product from the process pressure and completely discharge the internal pressure on the line. For high temperature applications, wait until the room temperature is reached.
12. Avoid sudden changes in pressure and temperature.
